The speaker says: "Vanderbilt was founded by Commodore Cornelius Vanderbilt, who was a steel and iron baron." Therefore, Mr Vanderbuilt made his money in the area of steel and iron.

1

The speaker says: "He gave a gift of one million dollars to a group of Methodists to found the university in 1873, and that university became Vanderbilt." Therefore, the university was created in 1873.

2

The speaker says: "So, what you're looking at right now is Alumni Lawn. And this is where in the spring we have music concerts and in May this is where all of our students graduate." Therefore, cultural events take place in spring.

3

The speaker says: "[...] is Alumni Lawn. [...] This is a hangout place for the students; at any given time you can see people out there reading and playing frisbee, and football and just hanging out with friends." Therefore, students play frisbee and football to relax.

4

The speaker says: "There was a student several years back in the Engineering School who was really struggling with his studies, and he was gonna drop out of Vanderbilt, but he went to talk to his professor, Prof. Jacobs. And Professor Jacobs gave him all the tutoring he needed." Therefore, one of the students had difficulties with his studies.

5

The speaker says: "[...] the student actually wound up graduating and becoming very, very successful and he made a large donation back to Vanderbilt for this auditorium, where classes are held today, and they named it 'Jacobs believed in me.'" Therefore, the lecture hall a rich former student paid for is called "Jacobs believed in me."

6

The speaker says: "Vanderbilt is the founding school for the biomedical engineering major; it's a very popular major for students who want to go into medicine, but also wanna study engineering. Are any of you thinking of studying engineering? [...] You might want to consider biomedical, it's very, it's very popular." Therefore, biomedical engineering is good for medicine and engineering.

7

The speaker says: "[...] and each one of those has its own..., has it's own library with 3.3 million books. Now about two million of those books can actually just be found online, so if you never ever want to go into a library, and believe me I know plenty of people who never set foot in a library, you can just sit out on this lovely day outside on the lawn and read your textbooks online." Therefore, about two million books can be read on the internet.

8

The speaker says: "There used to be, however, two bell towers when this was called 'Old Main'. It was the gymnasium, and there was a fire, and there were several books in here that were unfortunately lost and the bell tower itself actually collapsed, and only one of the bell towers was rebuilt." Therefore, the original bell towers were destroyed by fire.
